# Navigator Driver Uninstall Procedure for
# XP, Vista, Win7 and Win8 Computers

This procedure describes the recommended way of removing Navigator drivers from your XP, Vista, Windows 7, or Windows8 Computer.

Step 1: Plug in your Navigator to the USB if it is not already plugged in. Exit any programs that use the Navigator.

Step 2: Bring up the device manager by going to   start/control panel/device manager click on "**Ports (COM & LPT**)

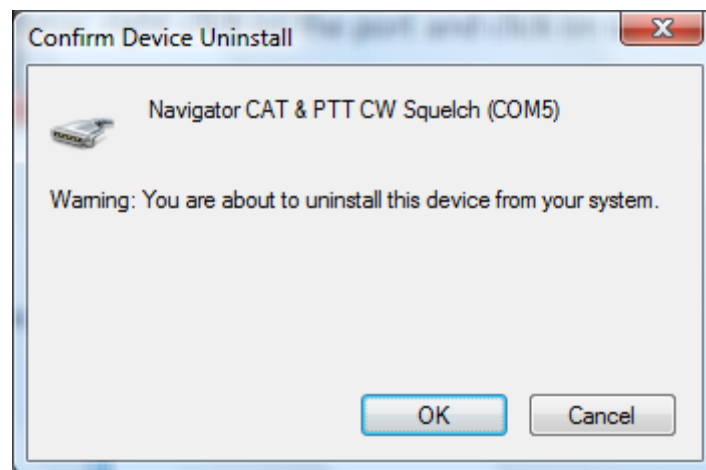

Uninstall each of the PORTs associated with the Navigator by *right* clicking on the port and then clicking on **uninstall**

Check "Delete the driver software for this device" and click **OK**

Go to the next COM port and right click. Select **Uninstall**. This time you will not see the "Delete …" message, since you deleted it when you uninstalled the first one.

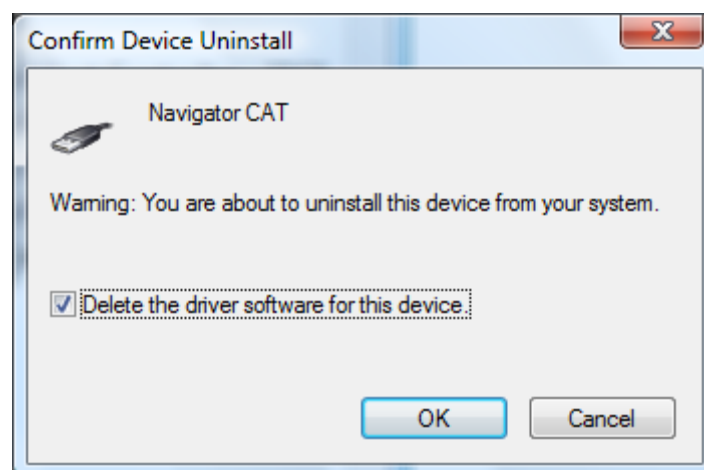

Click OK

Repeat for all Navigator COM Ports

Step 3: Now select the **Universal Serial Bus Controllers**. You will uninstall all the Navigator entries here as well.

Start with the first one, Navigator CAT. Right click on it and select Uninstall

On the first time, Check "Delete the driver software for this device", then click **OK**

Uninstall all the rest of the Navigator entries, these will not ask to "Delete … ", since it was removed on the first one.

After all Universal Serial BUS ports have been removed, **unplug the Navigator from the USB.**

The Navigator Drivers have now been removed from the system.

You may now proceed to install the new drivers on your system.
